

COSASCO® SERVICES

Rohrback Cosasco Systems is the world leader in corrosion monitoring equipment and systems and has a presence in every oil & gas producing region in the world. Quality and safety have always been our main objective and we continue to strive for the safest and most reliable corrosion monitoring equipment in the world.

Our role is to deliver a service designed to assist you in the implementation and efficient utilization of your corrosion monitoring assets and to support the vital functions of ensuring plant integrity and reduction of risk.

The COSASCO® system has been used in industry for over 50 years with a proven safety track record. COSASCO® is recognized as the industry standard and has earned its best in class reputation. We promote our services on the basis that nobody knows our products better than us. With over 50 years in the business our experience and product range is wider than any of our competitors.

Rohrback Cosasco Systems skilled field technicians are trained and certified to only the highest standards to provide an unsurpassed quality of service. We offer a complete range of services from retrieval of corrosion monitoring and chemical injection devices to project engineering and design of custom online corrosion monitoring systems. RCS will make every effort to provide you with the most efficient and affordable products and services with safety and quality as a number one priority.

Retrieval of COSASCO® Coupons Under Pressure

RCS offers a variety of COSASCO® Field Services, including:

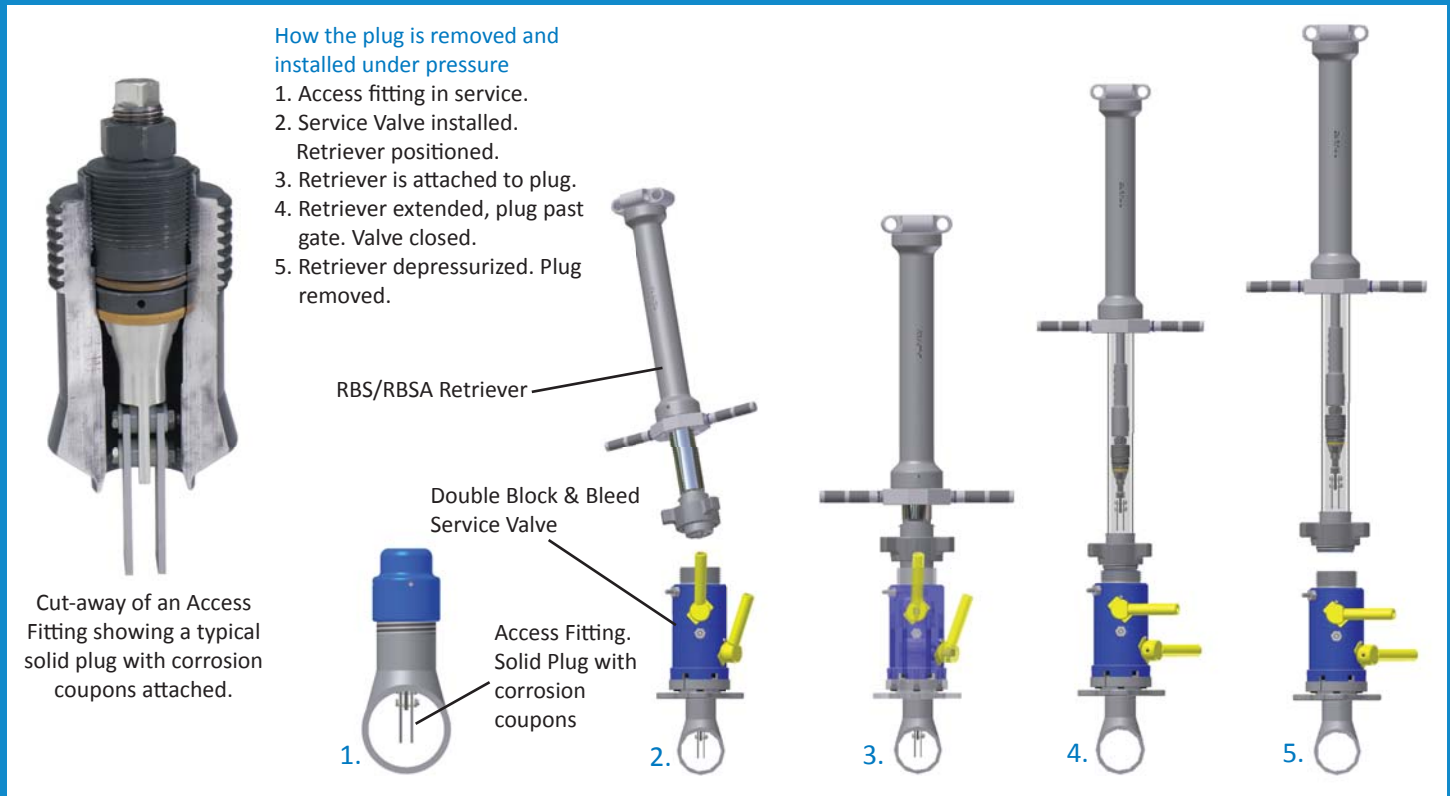

- Hot Tapping of new Access Fittings
- Online retrieval and servicing of corrosion monitoring and chemical injection devices
- Access Fitting Re-facing
- Servicing of both mechanical and hydraulic systems
- Corrosion coupon & corrosion/erosion data analysis
- Side-stream corrosion rate analysis & chemical optimization
- Corrosion & erosion monitoring system audits and chemical injection surveys
- Design, installation and commissioning of monitoring systems
- Combined analysis of chemical injection systems and monitoring

Installation of Ultracorr® Sensors and Instrumentation

HOW THE COSASCO® SYSTEM WORKS

The Cosasco System consists of an access fitting with a solid or hollow plug in it to carry the monitoring or injection device, a service valve, and a retrieval tool. Shown below, the access fitting is permanently attached to the vessel or pipe, and the Double Block & Bleed Service Valve and RBS/RBSA Retriever are used to insert or remove the various probes, coupons, or injection equipment.

In order to better serve the needs of the growing industries we have regional offices located worldwide:

Rohrback Cosasco Systems, Inc
Santa Fe Springs, CA USA*

Rohrback Cosasco Systems, Inc
Houston, TX USA

Rohrback Cosasco Systems UK Ltd.
Aberdeen*

Rohrback Cosasco Systems Pte. Ltd.
Singapore

Rohrback Cosasco Systems Pty. Ltd.
Perth, Australia
